Oni Oluwadarasimi Israel

Lagos State, Nigeria • israldarasimi7@gmail.com • +234(0)8028195414 • www.linkedin.com/in/darasimi-israel

PROFESSIONAL EXPERIENCE

- **Monitored and triaged 100+ weekly security alerts using Splunk, escalating critical threats per SLA.**
- **Investigated 25+ incidents** including phishing, brute-force, and endpoint anomalies, supporting senior analyst decisions.
- **Mentored junior analysts** on SOC workflows, alert handling, and documentation standards.
- **Interned at Lagos Internal Revenue Service (LIRS)** for six monthe **(Mar-Aug 2026)**
- **Validated web application vulnerabilities using Metasploit, Burp Suite, and SQLMap**, including SQL injection and XSS.

- **Conducted a simulated penetration test on a WPA2-secured wireless network** using **Airodump-ng** to capture authentication handshakes.

- **Used Aircrack-ng with a custom wordlist to successfully crack the Wi-Fi password**, demonstrating practical understanding of wireless network vulnerabilities and dictionary attacks.

- **Gained hands-on experience with wireless packet analysis**, encryption standards (WPA/WPA2), and ethical hacking practices in a controlled environment.

PERSONAL PROJECTS

- **Web Vulnerability Scanner** – **Nov** *2024*
  Cybersecurity Project | Technologies Used: Python, Flask, Requests, BeautifulSoup, Firebase

Built a Python-based tool with my team to scan URLs for vulnerabilities including SQL Injection, XSS, SSRF, and Broken Access Control. Developed an interactive web interface with Flask and integrated Firebase Firestore for data storage and real-time reporting. **GitHub Repository:** View project

- **Core Monitoring Simulation** – Feb 2025
  Systems Engineering Project | Technologies Used: Python, Tkinter, Threading, Matplotlib

My team and I created a multi-core task simulation with Python to monitor core execution and detect failures. Implemented a real-time GUI for performance tracking and automated logging. **GitHub Repository:** View project

- **Cyber Threat Visibility & SIEM Implementation** – Sep 2026
  Cybersecurity Project | Technologies Used: Wazuh, Suricata, AWS (EC2, CloudTrail), Tailscale, OpenSearch, Atomic Red Team, Shuffle SOAR, Docker

Deployed and configured a central Wazuh cluster and agent environment for log collection, system auditing, and vulnerability detection. Integrated Suricata network intrusion detection engine on cloud nodes (AWS EC2) to monitor live traffic and forward alerts to Wazuh. Configured AWS CloudTrail integration to monitor API calls and cloud resource changes. Executed automated threat simulations using Atomic Red Team mapped to MITRE ATT&CK techniques. Deployed self-hosted Shuffle SOAR instances using Docker Compose for automated response workflows, building custom OpenSearch dashboards with secure Tailscale telemetry.

EDUCATION

Bells University of Technology — Ogun state, Nigeria
Bachelor of Technology — Nov 2022-2027
Major: Information Technology

Skills

- **Programming:** Python
- **Technical Skills:** Splunk (SIEM),Vulnerability Assessments, Penetration Testing, Incident Response, Active Directory Management, Network Monitoring, Network Troubleshooting, ITOP Help Desk Support
- **Operating Systems:** Windows Server, Linux (Ubuntu, Kali).
- **Languages:** English, Yoruba (Fluent).

- **Soft Skills:** Communication, Teamwork, Problem-Solving, Time Management, Adaptability, Attention to Details.
